# BPOS Point-of-Sale for Restaurants, Bars and Nightclubs

BPOS Point-of-Sale software is an innovative, flexible and secure Windows-based touch screen point-of-sale system for the restaurant, bar and nightclub industries. Operating on a Microsoft.NET software platform with a SQL database, BPOS is designed to provide maximum efficiency, flexibility, security and simplicity for the end user.

BPOS has been designed and developed by experts in the restaurant, bar and nightclub industries for specific use within these industries.

## Efficiency

The purpose of a computerized POS system is to increase the efficiency of the establishment. BPOS does this through the use of Dynamic user interfaces and a series of integrated modules. Customers can determine what work flow works best for their establishment and then design front-of-the-house screens to meet that work flow.

## Flexibility

Flexibility is a cornerstone of the BPOS design. BPOS has been developed to provide both management and staff with maximum flexibility. All front-of-the-house screens are fully customizable through back office setup. The setup and edit process for front-of-the-house screens have been designed so that users can format screens, buttons, and related items quickly and easily.

## Security

BPOS has been developed from the very first line of code with security in mind. Not just the security, the user sees such as passwords and login procedures, but also internal security within the database for the proper and secure storage of all sensitive information including credit card data, employee information, sales information and all other information that may be considered sensitive.

## Simplicity

From day one BPOS has been designed with simplicity in mind. BPOS is Windows based providing users with the type of graphical user interfaces that they are used to seeing and working with. The back office is designed for ease of use with clear and simple navigation from one functional area to another.

## Key Benefits of BPOS

- **Dynamic User Interface**– BPOS offer fully customizable front-of-the-house screens. Screens are designed and formatted in the back office. Screens can contain tools such as a ticket window, ten key, address window, keyboard, etc. and buttons that may relate to functions or items. All tools and buttons are fully customizable and have their own set of properties including size, shape, color, fonts, etc.
- **SQL Architecture**– BPOS is built upon a SQL database architecture which allow for easy import and export of data.
- **Delivery and Dispatch** - BPOS offers comprehensive delivery and dispatch functionality for establishments who offer delivery services. Some of the many features included are Caller ID, cross reference between name, phone and address, delivery time tracking, last order recall, and mapping of the best delivery route for the drivers.
- **Gift Card Modules** - BPOS' gift card modules will help your business increase sales and establish customer loyalty. The BPOS gift card module can be used to issue and track multiple types of gift cards for one or more locations.
- **Scheduling**– BPOS provides complete scheduling by department and job. The module tracks all hours worked and can interface directly with payroll programs.
- **VSS Integration**– BPOS offers a PC multichannel video surveillance system that can be integrated with BPOS.
