Brownstone Technology Solutions Releases BPOS Beta 1.0 on July 1
New point-of-sale system offers customizable interface for hospitality industry

(Redondo Beach, CA—June 25, 2009...) Brownstone Technology Solutions is releasing BPOS Quick Service Version 1.0 on July 1, 2009 for the hospitality industry. BPOS Point-of-Sale is a Windows-based touch screen restaurant management system which operates on a Microsoft .Net software platform. BPOS was designed to provide speed, flexibility, and ease of use together with a thorough and complete POS system and operator reporting. The user interface is completely customizable based on client design, and it may be designed on a client by client basis.

CEO Randy Bragg says, “It is our mission to meet or exceed the needs of our customers with the most current and appropriate technology solutions for their needs, while providing exceptional customer service. I am confident that BPOS will meet our client’s needs, and provide them with a greater ROI from their POS software.”

In addition to BPOS’ dynamic user interface, the software will offer full HR functionality, SQL architecture, a customer report writer, inventory control, scheduling, delivery, redundancy, and a user-friendly menu setup. Hospitality management can better control their costs by collecting data to match labor vs. sales, monitoring inventory on real time, tracking sales by employee, shift, department, and/or hour, and control of possible data loss or POS downtime.

During the next 90 days BPOS will be tested with five complete setups from current clients. During this process improvements and problems will be identified and addressed prior to the release of BPOS 1.1 on October 1, 2009. While the Beta program is limited to five clients, upper management and/or software support personnel will be visiting all interested clients to provide a demo of the beta program starting July 13th.

BTS specializes in integrated systems for the restaurant and bar, hotel and motel, retail and manufacturing industries. BTS’ corporate office is located in Redondo Beach, CA, with offices across the country. BTS provides a variety of products and services related to POS systems, video surveillance systems, network services, business computers, and related training.
